Has full consideration been given to the design and material usage for the Bill's stadium to provide the maximum use of locally supplied building materials and workforce development of local workers? For example the current proposed design of pre cast brick panels that would be made out of state and possibly Canada compared to historically laid in place brick by local bricklayers and laborers and Bills Fans!!! There are numerous advantages both aesthetically and financially to a laid in place brick fascade compared to the pre cast panels. A presentation of this has already been prepared and can be quickly provided to educate those who will make this decision. This presentation has already need provided to the Governor's office and to Ron Ruccia. I would be more than happy to discuss further if so desired. Thank you!
